

Implementation Evidence

Login Page

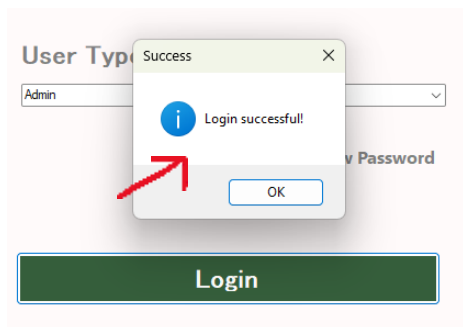

A screenshot of a login page with a light pink background. At the top right is a close button 'X'. The page has a heading 'Welcome Back!'. Below it are three input fields: 'Username' with the text 'Lisa', 'Password' with masked characters '*****', and 'User Type' with a dropdown menu showing 'Admin'. There is a checkbox labeled 'Show Password' which is currently unchecked. Below the inputs are two buttons: a green 'Login' button and a white 'CLEAR' button. At the bottom, there is a link 'Don't Have an Account?' followed by 'Create an Account'.

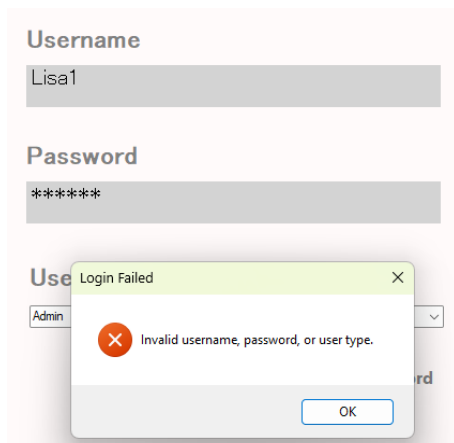

A close-up of the password field. The text 'Lisa@1' is entered. A red arrow points to the password field. Below it is the 'User Type' dropdown menu showing 'Admin'. At the bottom right is a checkbox labeled 'Show Password' which is checked. A red line is drawn under the 'Show Password' checkbox.

Login Page – Login Success Message

A screenshot of the login page with a success message dialog box. The dialog box is titled 'Success' and contains an information icon and the text 'Login successful!'. There is an 'OK' button. A red arrow points to the dialog box. The background shows the 'User Type' dropdown menu with 'Admin' selected and the 'Login' button.

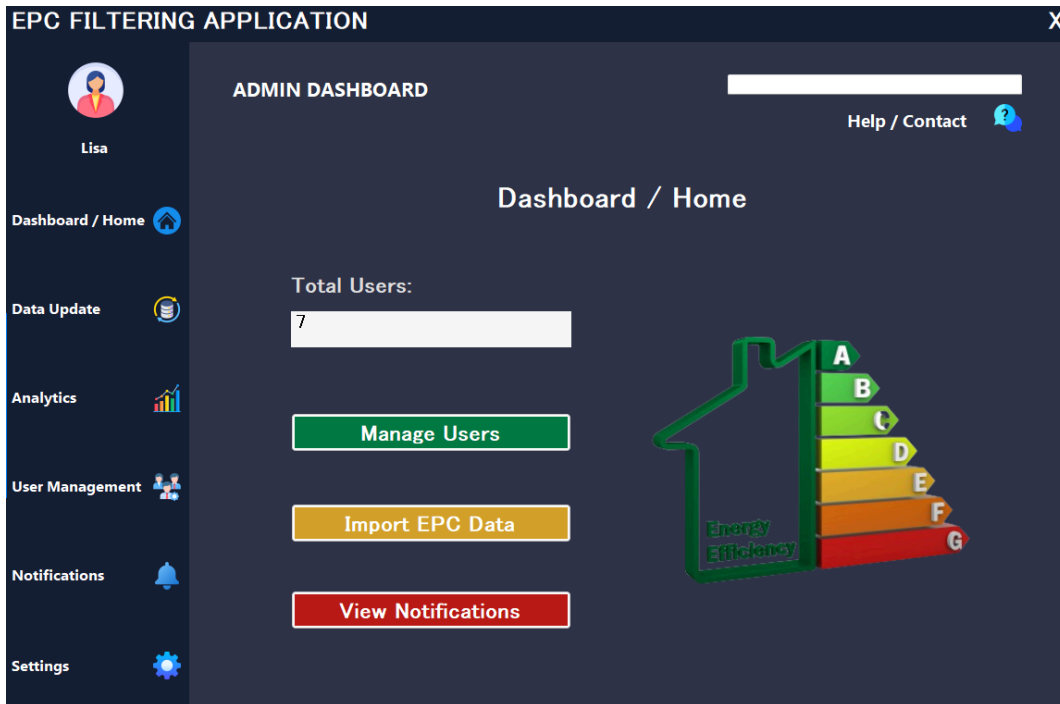

Login Page – Login Failed Error Message

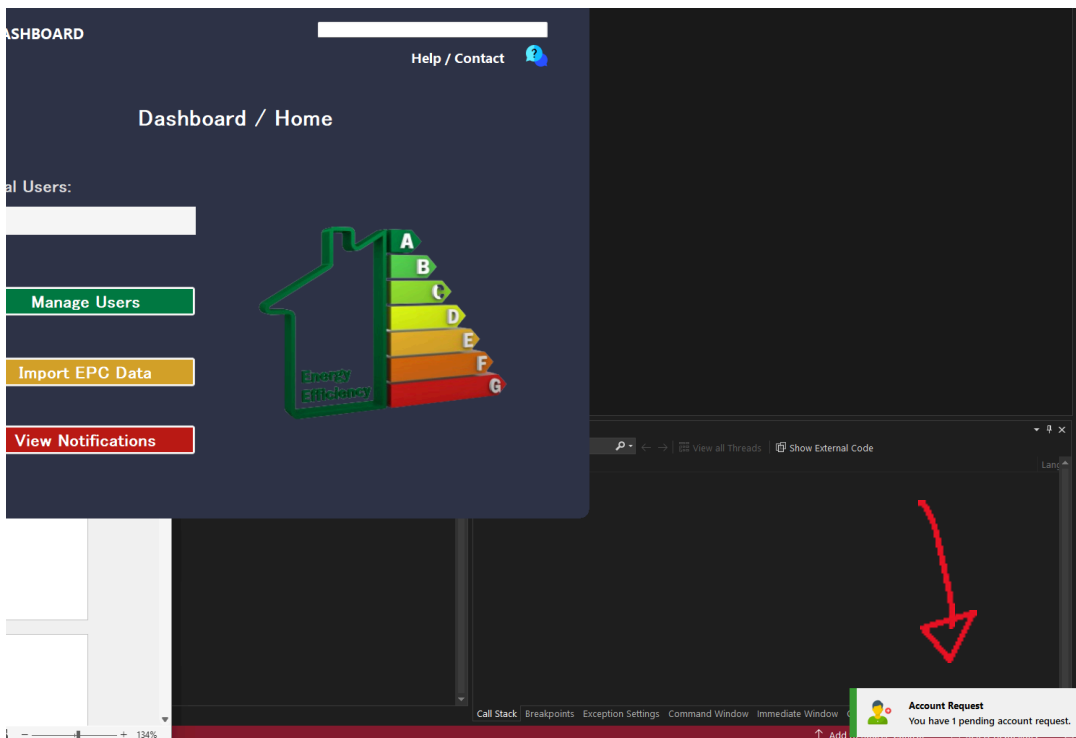

A screenshot of the login page with a failed error message dialog box. The dialog box is titled 'Login Failed' and contains an error icon and the text 'Invalid username, password, or user type.' There is an 'OK' button. The background shows the 'Username' field with 'Lisa1', the 'Password' field with masked characters '*****', and the 'User Type' dropdown menu with 'Admin' selected.

To see how it updated the username of this user, go to [Users](#).

4. Registering a User

The screenshot shows a 'Register Here' form with the following fields and controls:

- Username:** A text input field.
- Password:** A text input field.
- Confirm Password:** A text input field.
- User Type:** A dropdown menu.
- Email:** A text input field.
- Show Password:** A checkbox.
- REGISTER:** A green button.
- CLEAR:** A white button.

In the background, there is a dark-themed application interface with a sidebar containing 'PLIC' and 'ADMIN' links, and a main area with a 'Help / Contact' link, a 'Register a New User' button, and an 'Update User' button.

4.1 Registering a User - Weak Password Warning

The screenshot shows the 'Register Here' form with the following fields and controls:

- Username:** A text input field containing 'Abeeha'.
- Password:** A text input field containing '****'.
- Confirm Password:** A text input field containing '****'.
- User Type:** A dropdown menu with 'Employee' selected.
- Email:** A text input field containing 'ab@gmail.com'.
- Show Password:** A checkbox.

A 'Weak Password' warning dialog box is displayed over the form, containing the following text:

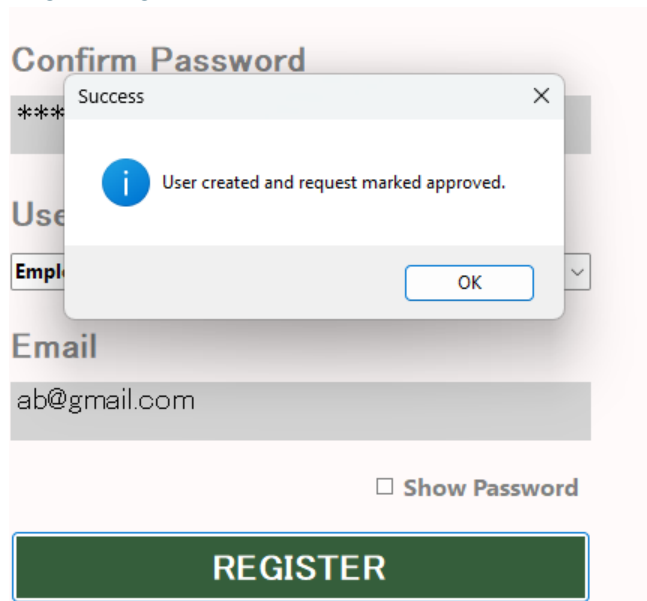

Weak Password

⚠ Password must contain at least:

- One uppercase letter (A-Z)
- One digit (0-9)
- One special character (!@#\$%^&*, etc.)

OK

4.2 Registering a User – User Created Success Message

The screenshot shows a registration form with fields for Password, Username, Employee ID, Email, and a Show Password checkbox. A green REGISTER button is at the bottom. A success message dialog box is overlaid on top of the form.

Admin Dashboard – Notifications

The screenshot shows the 'ADMIN DASHBOARD' with a sidebar on the left containing links to Dashboard / Home, Data Update, Analytics, User Management, Notifications, and Settings. The main content area is titled 'Notifications' and displays a 'List of all notifications' table. The table has columns for ID, Message, NotificationDateTime, CreatedBy, and IsRead. The notifications are listed in descending order of ID, with the most recent at the top. The 'CreatedBy' column shows 'Lisa' for the most recent notifications and 'Maria' for older ones. The 'IsRead' column has checkboxes for each notification.

Code Snippets

1. Log in and Role Based Access Control (RBAC)

```
private void btn_login_Click(object sender, EventArgs e)
{
    {
        usernameLocal = txt_username.Text;
    }

    // 1. Check if a user type has been selected
    if (comboBox_usertypelogin.SelectedIndex == -1)
    {
        MessageBox.Show("Please select a user type before logging in.", "User Type Required",
            MessageBoxButtons.OK, MessageBoxIcon.Warning);
        return;
    }

    // 2. Get the user type, username, and password from the controls
    string selectedUserType = comboBox_usertypelogin.SelectedItem.ToString();
    string username = txt_username.Text.Trim();
    string password = txt_password.Text.Trim();

    // 3. Build a parameterized query to check for a matching record in tbl_users.
    // Access table has fields: username, password, and usertype
    string loginQuery = "SELECT * FROM tbl_users WHERE [username] = ? AND [password] = ? AND [usertype] = ?";

    try
    {
        con.Open();
        using (OleDbCommand cmd = new OleDbCommand(loginQuery, con))
        {
            // For OleDb, parameters are positional.
            cmd.Parameters.AddWithValue("?", username);
            cmd.Parameters.AddWithValue("?", password);
            cmd.Parameters.AddWithValue("?", selectedUserType);

            using (OleDbDataReader dr = cmd.ExecuteReader())
            {
                // 4. Check if a matching record was found
                if (dr.Read())
                {
                    MessageBox.Show("Login successful!", "Success", MessageBoxButtons.OK, MessageBoxIcon.Information);

                    // Decide which form to open based on the user type
                    if (selectedUserType.Equals("Admin", StringComparison.OrdinalIgnoreCase))
                    {
                        admin_thirdDashboard adminForm = new admin_thirdDashboard();
                        adminForm.Show();
                        this.Hide();
                    }
                    else if (selectedUserType.Equals("Employee", StringComparison.OrdinalIgnoreCase))
                    {
                        EmployeeDashboard employeeForm = new EmployeeDashboard();
                        employeeForm.Show();
                        this.Hide();
                    }
                    else
                    {
                        MessageBox.Show("User type not recognized.", "Error", MessageBoxButtons.OK, MessageBoxIcon.Error);
                    }
                }
                else
                {
                    MessageBox.Show("Invalid username, password, or user type.", "Login Failed",
                        MessageBoxButtons.OK, MessageBoxIcon.Error);
                }
            }
        }
    }
    catch (Exception ex)
    {
        MessageBox.Show("Error: " + ex.Message, "Database Error", MessageBoxButtons.OK, MessageBoxIcon.Error);
    }
    finally
    {
        con.Close();
    }
}
```

2. Data Import from Access

```
private void SettingsUserControl3_Load(object sender, EventArgs e)
{
    string currentUsername = Login_Form.usernameLocal;
    if (string.IsNullOrEmpty(currentUsername)) return;

    string safeUser = currentUsername.Replace("'", "");
    string query =
        $"SELECT Email, ProfilePicturePath " +
        $"FROM tbl_users " +
        $"WHERE [Username] = '{safeUser}'";

    try
    {
        using (var con = new OleDbConnection(connectionString))
        using (var cmd = new OleDbCommand(query, con))
        {
            con.Open();
            using (var dr = cmd.ExecuteReader())
            {
                if (dr.Read())
                {
                    txt_settingsEmail.Text = dr["Email"].ToString();
                    var picPath = dr["ProfilePicturePath"].ToString();
                    if (!string.IsNullOrEmpty(picPath) && File.Exists(picPath))
                        picBox_profileChange.Image = Image.FromFile(picPath);

                    // ** Update any open dashboards **
                    foreach (var admin in Application.OpenForms.OfType<admin_thirdDashboard>())
                        admin.UpdateProfilePicture(picPath);
                    foreach (var emp in Application.OpenForms.OfType<EmployeeDashboard>())
                        emp.UpdateProfilePicture(picPath);
                }
            }
        }
    }
    catch (Exception ex)
    {
        MessageBox.Show(
            "Error loading settings: " + ex.Message,
            "Database Error",
            MessageBoxButtons.OK,
            MessageBoxIcon.Error
        );
    }
}
```

3. Filtering Functionality

```
3 references
private void btn_Filter_Click(object sender, EventArgs e)
{
    if (_allData == null)
    {
        MessageBox.Show(
            "No data has been imported yet.\nPlease click Import Data first.",
            "Filter Error",
            MessageBoxButtons.OK,
            MessageBoxIcon.Warning
        );
        return;
    }

    var filtered = ApplyFilters();

    if (filtered.Rows.Count == 0)
    {
        MessageBox.Show(
            "No properties found matching your criteria.",
            "Filter Result",
            MessageBoxButtons.OK,
            MessageBoxIcon.Information
        );
    }
}

1 reference
private DataTable ApplyFilters()
{
    // gather criteria
    string townFilter = txt_fmdCity.Text.Trim();
    var ratings = txt_fmdRating.Text
        .Split(new[] { ',' }, StringSplitOptions.RemoveEmptyEntries)
        .Select(r => r.Trim())
        .ToList();

    DateTime from = dtp_fmdFrom.Value.Date;
    DateTime to = dtp_fmdTo.Value.Date;

    // LINQ with null-safe pulls
    var rows = _allData.AsEnumerable()
        .Where(r =>
        {
            string town = r.Field<string>("POSTTOWN") ?? string.Empty;
            string rating = r.Field<string>("CURRENT_ENERGY_RATING") ?? string.Empty;
            DateTime? lodgement = r.Field<DateTime?>("LODGE_MENT_DATE");

            // Town filter
            if (!string.IsNullOrEmpty(townFilter)
                && !town.Equals(townFilter, StringComparison.OrdinalIgnoreCase))
                return false;

            // Rating filter
            if (ratings.Count > 0
                && !ratings.Contains(rating, StringComparer.OrdinalIgnoreCase))
                return false;

            // Date filter (must have a date and be in range)
            if (!lodgement.HasValue
                || lodgement.Value < from
                || lodgement.Value > to)
                return false;

            return true;
        });

    var filtered = rows.Any()
        ? rows.CopyToDataTable()
        : _allData.Clone();

    dataGridView1.DataSource = filtered;
    return filtered;
}
```

4. Data Visualisation

```

3 references
private void btn_distribution_Click(object sender, EventArgs e)
{
    if (_allData == null || _allData.Rows.Count == 0)
    {
        MessageBox.Show("No data loaded. Please import first.",
            "No Data",
            MessageBoxButtons.OK,
            MessageBoxIcon.Warning);
        return;
    }

    string cityFilter = txt_piechartCity.Text.Trim();
    DateTime fromDate = dtp_piechartFrom.Value.Date;
    DateTime toDate = dtp_piechartTo.Value.Date;

    var filtered = _allData.AsEnumerable()
        .Where(r =>
        {
            var lodg = r.Field<DateTime?>("LODGEMENT_DATE");
            if (!lodg.HasValue) return false;
            if (lodg.Value.Date < fromDate || lodg.Value.Date > toDate)
                return false;
            if (!string.IsNullOrEmpty(cityFilter))
            {
                var town = r.Field<string>("POSTTOWN") ?? string.Empty;
                if (!town.Equals(cityFilter, StringComparison.OrdinalIgnoreCase))
                    return false;
            }
            return true;
        });

    var groups = filtered
        .GroupBy(r => r.Field<string>("CURRENT_ENERGY_RATING") ?? "(Blank)")
        .Select(g => new { Rating = g.Key, Count = g.Count() })
        .OrderByDescending(x => x.Count)
        .ToList();

    chart_pie.Series.Clear();
    chart_pie.Legends.Clear();

    var seriesObj = chart_pie.Series.Add("Ratings");
    seriesObj.ChartType = SeriesChartType.Pie;
    seriesObj.IsValueShownAsLabel = true;
    seriesObj.Label = "#PERCENT{P0}";
    seriesObj["PieLabelStyle"] = "Outside";

    var legend = chart_pie.Legends.Add("RatingsLegend");
    legend.LegendStyle = LegendStyle.Table;
    legend.Docking = Docking.Right;
    legend.Alignment = StringAlignment.Center;

    seriesObj.Legend = legend.Name;
    seriesObj.LegendText = "#VALX";

    foreach (var g in groups)
        seriesObj.Points.AddXY(g.Rating, g.Count);

    chart_pie.Titles.Clear();
    chart_pie.Titles.Add(
        $"Distribution of Ratings for {cityFilter} ({fromDate:yyyy-MM-dd} to {toDate:yyyy-MM-dd})");
}

```

5. Error Handling/Validation

```

// 4. Check if a matching record was found
if (dr.Read())
{
    MessageBox.Show("Login successful!", "Success", MessageBoxButtons.OK, MessageBoxIcon.Information);

    // Decide which form to open based on the user type
    if (selectedUserType.Equals("Admin", StringComparison.OrdinalIgnoreCase))
    {
        admin_thirdDashboard adminForm = new admin_thirdDashboard();
        adminForm.Show();
        this.Hide();
    }
    else if (selectedUserType.Equals("Employee", StringComparison.OrdinalIgnoreCase))
    {
        EmployeeDashboard employeeForm = new EmployeeDashboard();
        employeeForm.Show();
        this.Hide();
    }
    else
    {
        MessageBox.Show("User type not recognized.", "Error", MessageBoxButtons.OK, MessageBoxIcon.Error);
    }
}
else
{
    MessageBox.Show("Invalid username, password, or user type.", "Login Failed",
        MessageBoxButtons.OK, MessageBoxIcon.Error);
}
}

```

6. Notification Generation

Admin sends notification and it gets stored in the database:

```

1 reference
private void btn_sendNotif_Click(object sender, EventArgs e)
{
    // 1. Create the notification message you want employees to see
    string notificationMessage = "New EPC data update is available!";

    // 2. Insert the notification into your tbl_notifs
    // If the currently logged in user is an admin, you might do:
    InsertNotification(notificationMessage, Login_Form.usernameLocal);

    // 3. Optional: show a confirmation to the admin
    MessageBox.Show("Notification has been sent to employees!",
        "Success", MessageBoxButtons.OK, MessageBoxIcon.Information);
}

```

Show unread notifications to employees' dashboard

```

1 reference
private void ShowUnreadNotificationsAsToast()
{
    using (OleDbConnection con = new OleDbConnection(connectionString))
    {
        con.Open();
        string query = "SELECT ID, [Message] FROM tbl_notifs WHERE [IsRead] = false";
        using (OleDbCommand cmd = new OleDbCommand(query, con))
        {
            using (OleDbDataReader reader = cmd.ExecuteReader())
            {
                while (reader.Read())
                {
                    string message = reader["Message"].ToString();
                    // Create and show toast
                    ToastForm toast = new ToastForm(message);
                    toast.Show();

                    // Mark notification as read
                    MarkNotificationAsRead(Convert.ToInt32(reader["ID"]), con);
                }
            }
        }
    }
}

```

Toast Form for Notification

```

7 references
public partial class ToastForm : Form
{
    int toastX, toastY;
    2 references
    public ToastForm(string toastMessage)
    {
        InitializeComponent();
        lbl_toastmessage.Text = toastMessage;
        this.TopMost = true;
    }
}

```
